Thin Skinned
Exploring Design Through Vacuum Forming

This seminar/workshop will explore human scaled design primarily through the application of vacuum forming. The course takes advantage of the new fabrication equipment now available in the dF shop, especially the Formtech 1250 Vacuum Former that allows plastic panels up to 4’ square to be molded into furniture elements, building components, etc. Initial studies will be conducted with a small-scale dental vacuum former with a 5” square panel size that will be located in Annex II.
