Big Design Comes From SMALL Projects

The SMALL studio explores sponsored projects of intimate scale, with careful attention to materials, details, rituals, and exquisitely solving specific or envisioned program needs.

Project One:
Design of Portable Deployable Farm Stand for the Sustainable Student Farm.
You will have the opportunity to design a small movable space to display and sell the farm produce throughout the community, to be towed by a bicycle or small vehicle.

Project Two:
Design of Permanent Small Structures for the Sustainable Student Farm
You will have the opportunity to design one of several structures needed to further promote the development of the Sustainable Student Farm on campus. These include 1. Crop Washing Pavilion, 2. Open Air Classroom, 3. Visitor’s Orientation/Picnic Pavilion, and 4. Equipment Storage Building. Each project is envisioned to be about 150-750 sf, which will allow the participants to develop structure, materials, details, cost analysis, etc.

Our objective is to apply innovative design ideas to real world needs. Funding to construct on or more structures is pending. We expect to have the opportunity to realize some of the ideas generated in the studio.
